

## Extreme Flight RC 110 inch Yak-54 Aileron Horn Installation Addendum

Thank you for your purchase of the Extreme Flight RC 110" Yak-54. In order to make the set-up of your aileron servos and linkages easier we have included a new set of control horns which compensate for the varying thickness off the wing and aileron. Please install the horns with the holes drilled farthest from the base in the outboard position and the horns with the holes drilled closer to the base in the inboard position. This will place the pivot point of each linkage at the same distance from the hinge line, making set-up and programming easier.
